1. The first step in the process of the investigation is to identify the problem. This is done by gathering information from the client and the witnesses. The next step is to determine the cause of the problem. This is done by analyzing the information gathered in the first step. The third step is to develop a plan of action. This is done by determining the steps that need to be taken to solve the problem. The fourth step is to implement the plan. This is done by carrying out the steps that were developed in the third step. The fifth step is to evaluate the results. This is done by comparing the results of the investigation to the original problem. The sixth step is to report the findings. This is done by writing a report that summarizes the results of the investigation. The seventh step is to follow up. This is done by checking back with the client to see if the problem has been solved.
